

CITY PROPERTY

City Property, an established management agent within the property sector, approached Mpowered to assist in streamlining their B-BBEE processes and help to achieve an optimized B-BBEE score.

City Property experienced a challenge in reporting monthly as there were different element champions and it was difficult to house the B-BBEE compliance information in one central place. City Property also experienced difficulty in implementing internal targets as there was no way of assessing what the shortfalls were on the different elements to define those targets and therefore attain them.

By engaging Mpowered, and using the BEEToolkit, City Property was able to track and report on all elements in one central space with an active scorecard. Each element champion could understand their current score while using the Target Scorecards and Scenario Planner to highlight low hanging fruit and close the gaps. The Implementation Planner made it easy to track and manage the plan to ensure that the targets were achieved.

The results of the above mentioned steps resulted in City Property achieving their goals - being able to report effectively whilst optimising their B-BBEE score.
