

# TIMKEN

A leading global industrial company with a growing portfolio of engineered bearings and power transmission product brands, Timken, came to Mpowered for help with tracking and managing their B-BBEE Scorecard.

The inability to report internally presented challenges which forced Timken to try and use excel based calculators, however, this, in its own right, added further administrative challenges to maintain a sustainable excel solution within an everchanging industry.

The introduction of Mpowered's BEEToolkit allowed for monthly tracking of an accurate live B-BBEE scorecard. Mpowered's B-BBEE compliance management professionals were also able to assist in providing technical B-BBEE advisory support, regular status reviews, as well as system related or industry related advice.

Timken was successfully able to report internally using an efficient and reliably consistent measure. As a result, the company displayed continuous improvement and are now a proud Level 3 B-BBEE status holder.
