

ABOUT TIMKEN

Timken is a leading global industrial company with a growing portfolio of engineered bearings and power transmission product brands,

The inability to report internally presented challenges that forced Timken to try and use excel based calculators; however, this, in its own right, added further administrative obstacles to maintaining a sustainable excel solution within an everchanging industry.

THE STORY OF TIMKEN & MPOWERED

Timken approached Mpowered to assist with the tracking and managing of their B-BBEE Scorecard. The introduction of Mpowered's BEEtoolkit allowed for monthly tracking of an accurate real-time B-BBEE scorecard. Mpowered's B-BBEE compliance management experts also provided:

- Technical B-BBEE advisory support.
- Regular status reviews.
- System-related or industry-related advice.

Timken was successfully able to report internally using an efficient and reliable measure.

As a result, the company displayed continuous improvement and are now a proud Level 3 B-BBEE status holder.
